CMIE **ProwessIQ** Prowess for Interactive Querying  
Most Comprehensive Database on Indian Companies

**Financial performance of 51,770 companies**

### About ProwessIQ

ProwessIQ, or Prowess for Interactive Querying, is a powerful internet-based application for querying CMIE's database on performances of listed and unlisted companies. It is simple and easy to use.

ProwessIQ provides charting tools and well-formatted reports on performances of companies. The reports provide financial information including analytical ratios and benchmark comparisons.

Downloads of source documents interim results, ratings rationales and annual report extracts are part of the service.

### What is ProwessIQ?

ProwessIQ is an interactive querying system to find companies from the Prowess database. It consists of a client software that provides an interface to construct and submit queries over the internet to the Prowess database and receive answers to the queries from the database.

ProwessIQ therefore is all about interactive querying of the Prowess database.

All queries in ProwessIQ aim at finding companies that match a given set of search conditions. The ProwessIQ interface therefore consists of a large number of query construction facilities, display of query results in spreadsheets and the further use of the results of queries.

The Prowess database consists of the financial performance of Indian companies. The database contains information on all listed companies and a larger set of unlisted companies. The database is built from the audited Annual Reports of companies and information submitted to the Ministry of Company Affairs; and in the case of listed companies, the database also includes company filings with stock exchanges and prices of securities listed on the major stock exchanges.

The client server is developed and maintained by CMIE. Similarly, the Prowess database is also developed, maintained and updated by CMIE.
